

ACE

TRUCK BODIES PTY LTD

...built to go the distance

Ace Truck Bodies lead the way with our innovative design and manufacturing of truck bodies. Each unit is custom-made to your exact specifications and manufactured using the highest quality materials sourced from Australia and around the world.

Ace Truck Bodies has an extensive product range that suits any size vehicle. Our personalised service and attention to detail means your truck is on the road earning you money in record time.

Ace Truck Bodies offers competitive pricing, fast turnaround and make sure that you are involved in every step. We value our relationship with our customers and ensure that the quality of our units means that they return to us time and again as their needs change and their business grows.

Our custom made truck bodies range in size from utility bodies through to large trucks with a 14-pallet capacity.

We take care of design, manufacturing, refrigeration, insurance quotes, body repairs, modifications and delivery to your door anywhere in Australia.

Each truck body is manufactured in strict adherence to Australian standards for Australian Design Rules (ADR). These standards for vehicle safety, anti-theft and emissions apply to vehicles newly manufactured in Australia or imported as new or second hand vehicles, and supplied to the Australian market.

All our work conforms to Australian health regulations and all bodies come with a written warranty.

We specialise in:

- load restraint systems
- temperature management
- multi temperature compartments
- maintenance of your specialised refrigeration unit
- truck body/refrigeration unit compatibility (weight distribution, chassis length)

Our mission

At Ace Truck Bodies, it is our mission to be the transport industry's number one choice for truck body building, service and repairs and deliver value through excellence in design, quality and customer service. We work with you to ensure your unit is built to your exact specifications and we will always give you the best price.

Materials we use

All our bodies are insulated with the highest quality fibreglass panelling incorporating fibreglass H beam ribs and high density polyurethane insulation. Our panels are machine cut to ensure perfect joint fit, which in turn ensures better insulation.

Polyurethane insulation is water resistant and has excellent thermal properties, such as:

- high thermal properties
- high mechanical strength
- high moisture resistance
- lightweight
- long term performance
- proven solution

Design

We provide you with personalised service and encourage your involvement in each stage of the production process.

Our design team start by taking the time to familiarise themselves with your business, your transport needs and your budget. We give you effective solutions at the planning stage, then step you through the manufacturing and assembly process.

Equally important is our after sales support. A qualified team maintains your vehicle and will carry out any future repairs. Hire vehicles can also be arranged when extensive work is necessary.

About our bodies

Ace Truck Bodies specialises in refrigerated truck bodies and work in close association with specialist refrigeration companies to provide the cutting edge in refrigerated transport technology. Appropriate reinforcement is installed to accommodate a variety of refrigeration units.

Doors

Rear and side doors are made with alloy trim, stainless steel hardware, camlocks and offset hinges to allow the doors to fully open and latch to body sides. Rear door frames are manufactured from either stainless steel or hot-dipped galvanised steel, depending on structural requirements. This provides extra reinforcement for heavy-duty work.

External trim

Our external trim consists of a variety of heavy-duty aluminium angles and channel to doorways. We use a heavy duty base rail, giving maximum support to the walls of the body in critical areas. Polished and anodised are available. Alloy mudguards are fitted to each body as a standard feature.

Sub frame

The steel subframe is hot-dipped galvanised, with full width rear step and docking rubbers. These galvanised options ensures a long life span for the subframe, even in high corrosive environments.

Floors

We use an integrated multi-layered flooring system with hot-dipped galvanised steel cross members. We use a "C" section cross member which gives a greater area of insulation as opposed to the traditional RHS cross members whose design doesn't allow for such wide coverage.

Our floors can be built to forklift rated specifications.

Advantages of our floors:

- sound structure to handle constant forklift loading
- uniquely insulated with polyurethane foam which increases insulation, thereby minimising refrigeration plant and fuel usage.

Only the highest quality structural ply is used in our flooring systems.

Repairs and service

At Ace we don't just build truck bodies, we repair and service them as well. We care for your truck body as if it were ours. Part of your design package is a maintenance program which will ensure you get optimum efficiency and sustained durability.

For minor repair jobs, we'll come to you and fix your truck body on-site. This saves you the hassle of needing to schedule time to come to us. For bigger repair jobs, we'll book you in as soon as possible and give you a definite time when you can get your truck back and get on with running your business.

We specialise in fixing floors, wall delamination and repairs, and can service and repair any size vehicle, from a utility to a semi-trailer. All jobs are fully quoted for your approval before we start. Insurance jobs are also a specialty.

If it needs fixing, Ace can get it back on the road for you in record time, with quality repairs and a written warranty.
